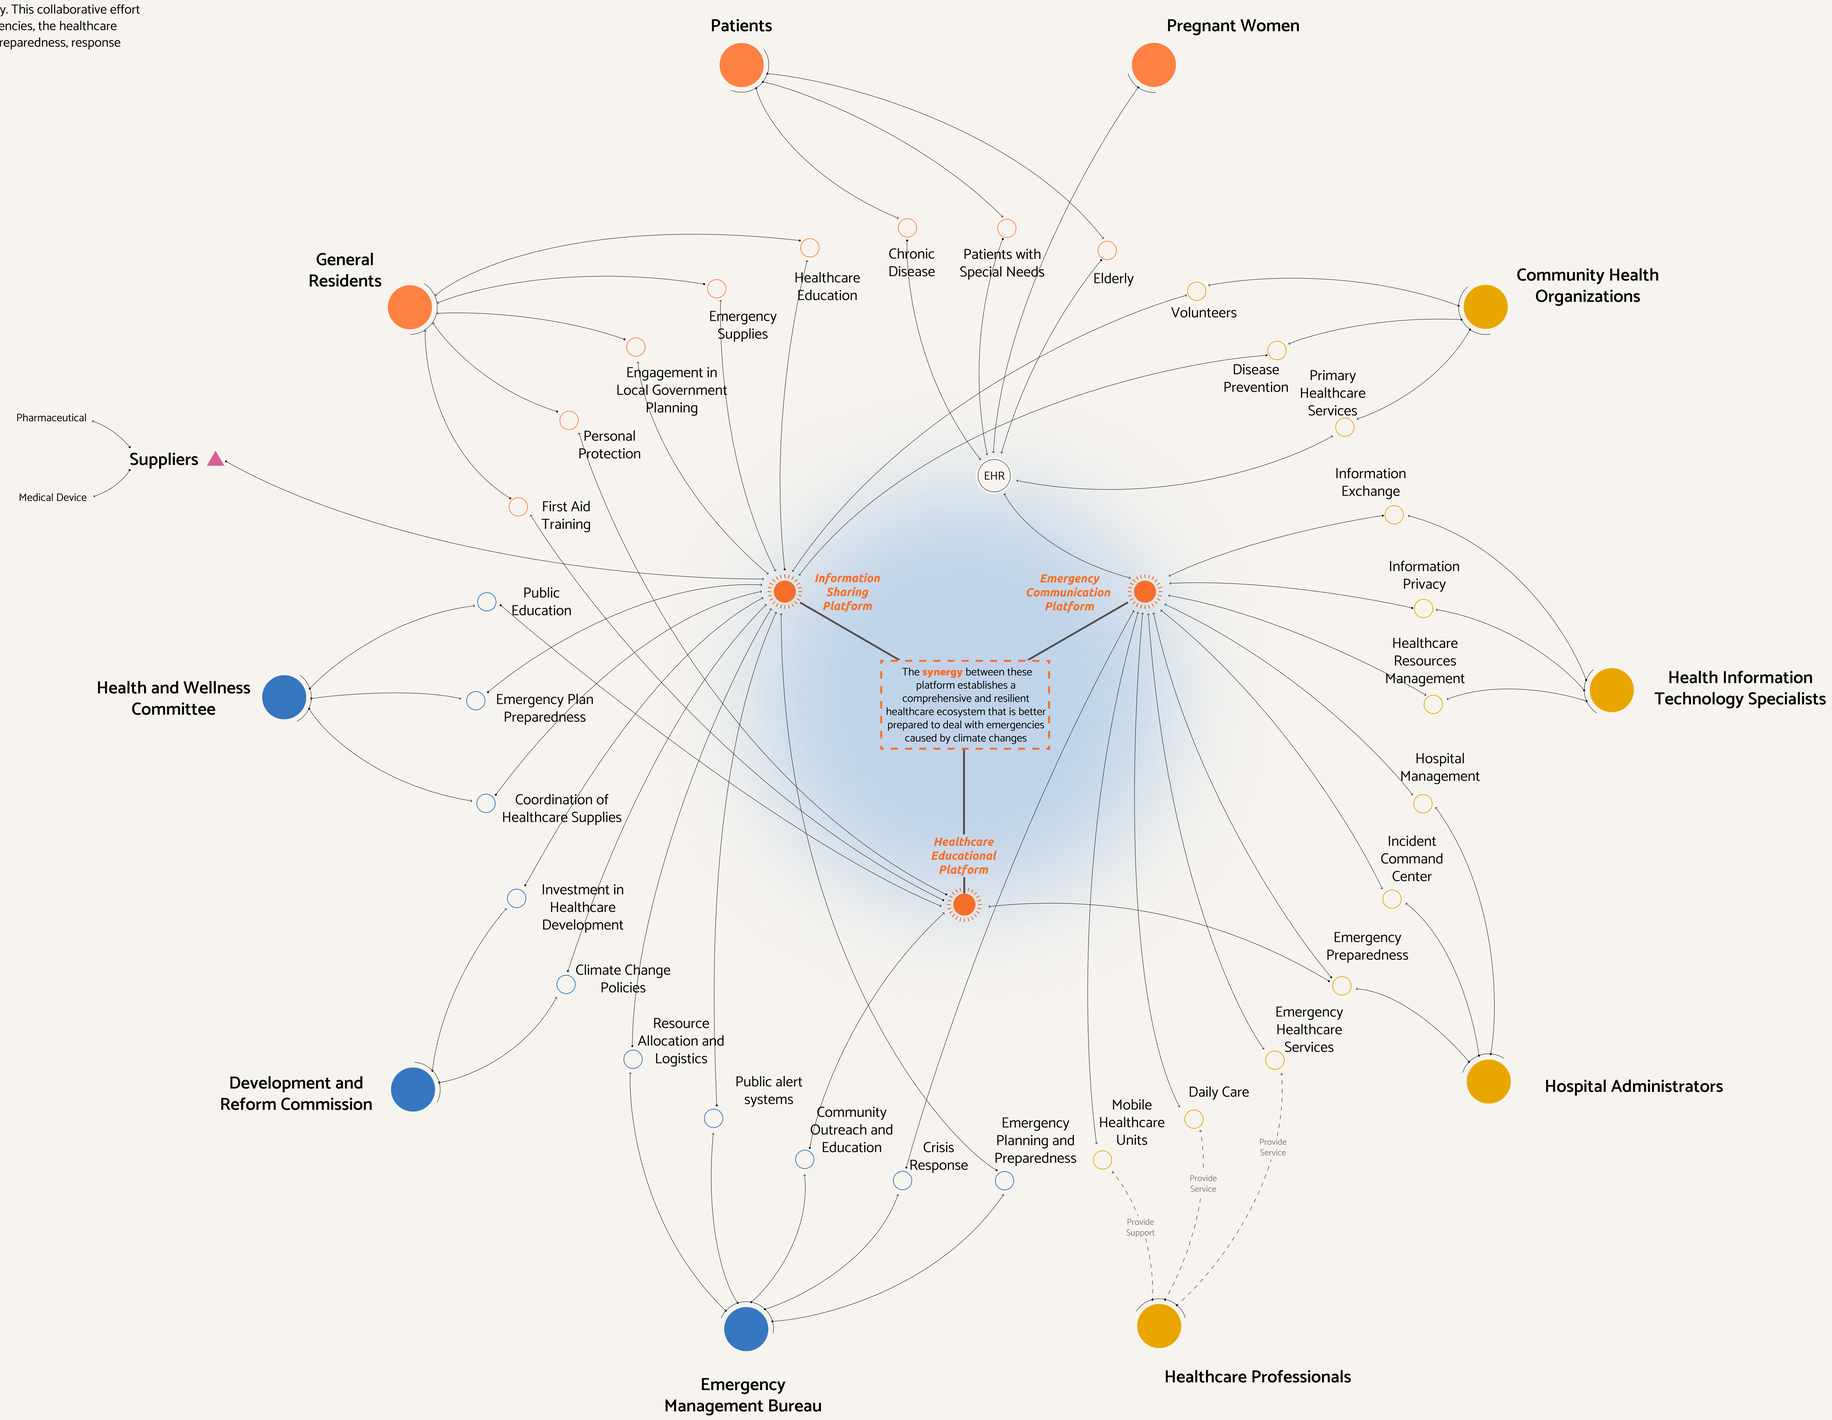
NEW ECOSYSTEM MAP

Che Kemeng S301537
Zhang Jianning S297771


The healthcare ecosystem functions as a complex and interconnected network, intricately designed to not only mitigate the impact of disasters caused by climate changes but also to respond effectively to emergencies and facilitate swift recovery. This collaborative effort brings together diverse stakeholders, including governmental agencies, the healthcare system, and the public, with a shared goal of enhancing overall preparedness, response mechanisms, and resilience.
