

LEGENDS:

Components highlighted with dotted yellow color are mounted on PCB. PCB separate schematic is available in next page

- Dotted blue box represents PowerBox in Schematic
- Corrections placed on PCB
- ===== Thick lines for High voltage
- ===== Thin lines for 12V voltage

- [illegible]

Please Review PCB Schematic here with the original PCB schematics

PCB Schematic

LEGENDS:

----- Dotted boxes show connections of Relays according to individual functionalities

Connectors with PIN 87627-0262 fixed on PCB and PIN 29-04-2000 female signal connectors will connect on top to connect different signals. With PCB With purple color, names of signals which will be connected to Connectors are mentioned. Those connectors with which nothing is mentioned to connect are not used for now for Prototype.

 On the PCB, Screw and nuts used to connect wires with the mounting holes
