The thesis aims to provide an innovative, sustainable and integral service to the population of Valsesia, in particular in the hamlet of Riva Valdobbia of Alagna Valsesia. "4LP" is a project of an intergenerational housing located in a growing and developing mountain environment, with an eye to local traditions and customs, especially given the presence of Walser culture in the territory. From this analysis of the Walser territory and culture, followed by a research on how to insert a theme such as co-housing, as "innovative" and "new" for the place where we are, and a research on who could be the users of this project, The idea was born of a project that is not only for those who are looking for a temporary or longer-lasting home, but also for the inhabitants already present on the territory, creating a place where you can create a community, a place where everyone can share thoughts and spaces. The design strategy aims to re-establish a balance in relations between local communities and to explore opportunities to attract new residents to mountain areas, promoting a presence not only tourism but also supporting traditional activities and the link with the territory.
