

**Analysis and workout of a small household appliance with Philips Design.
Control plan**

by Elisabetta Sforza

Tutor: Luigi Bistagnino

Co-tutor: Carla Lanzavecchia, ecodesign expert

senior design consultant Oscar Peña, Philips Design Milano

design consultant Giulio Ceppi, Philips Design Milano

Thesis subject is an iron with its ironing-board for old blind people, in order to help their independence but alone all their autonomy and personal satisfaction.

At first I made a deeply analysis about old people's bodily and psychological problems. Then I had examined thoroughly tactile perception, because this is the channel through the object must interact with old user.

So I reach to a wall-object similar to traditional iron-table but without usual problems of carriage and system set. This object, in the form and in many shrewdnesses, has

been designed around person who'll use it, in order to bring him through the sequence of actions to do

For example, the iron, with its smooth material, has been planed for the hands considering the normal problems of an elderly person.
